

MEET DR. CHOI

Harvard-trained, board-certified orthopaedic spine surgeon Dr. Daniel E. Choi specializes in minimally invasive techniques at his solo practice, Spine Medicine & Surgery of Long Island. His special interests include microsurgery, interbody fusion, revision surgery and robotic spine surgery.

As a physician, Dr. Choi's guiding philosophy is simple: every patient is met with compassion and respect, and treated as if he were treating his own family member. His goals are to ensure his patients understand all aspects of their condition and to explore all possible nonoperative treatments before considering surgery. When he's not with patients or serving on faculty at Zucker/Northwell School of Medicine, Dr. Choi is passionate about using social media as a public health tool and a way to connect and educate. He regularly posts videos and content on social media and his YouTube channel, which has over 24K subscribers. From sharing information on spine health to reacting to medical dramas, he's all about making medical topics approachable and entertaining.

Dr. Choi also does speaking engagements, serves as an expert guest on radio and television programs, and was even featured on Sirius XM's Doctor Radio Back Pain Show.

SPEAKING ENGAGEMENTS

- **Cervical Spine Research Society Annual Meeting 2022** - "Incorporating Cervical Disc Replacement Into Your Practice"
